

# Scheduling Live Updates for Symantec AntiVirus

## For the PC:

1. Double-click on the **AntiVirus** icon in the system tray. It looks like a little yellow shield in the lower right-hand corner of the screen.

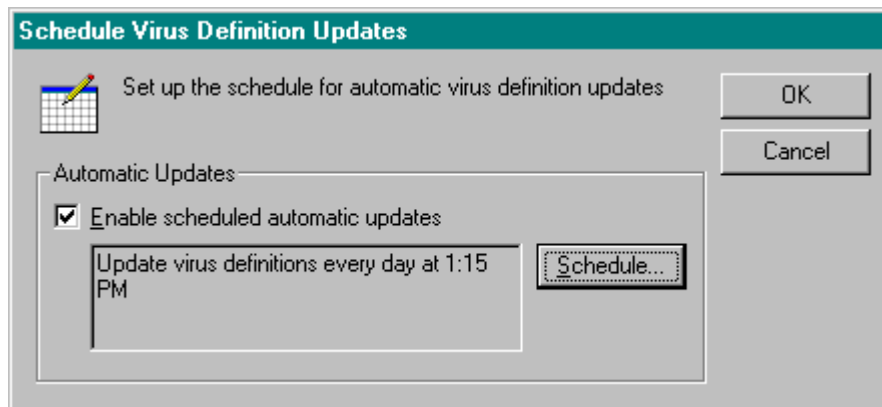

2. In the **Symantec AntiVirus Corporate Edition** window, open the **File** menu and click on **Schedule Updates...**

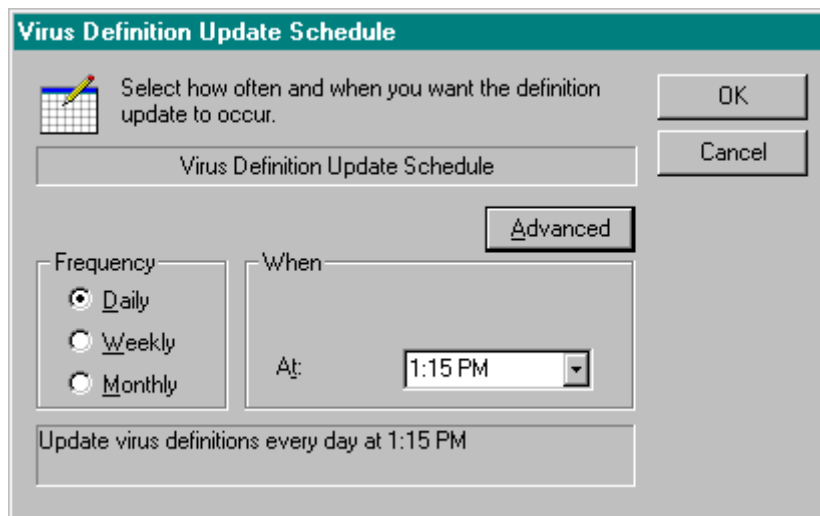

3. In the **Schedule Virus Definition Updates** window, make sure that the **Enable scheduled automatic updates** box is checked.

4. Next press the **Schedule** button.
5. Select **Daily** updates from the **Frequency** selection, then select a time from the drop-down box in the **When** section.

**Note:** The update time should be set for a period when your computer will be on, but when you are unlikely to use it. Lunch time is a good choice for most people.

6. Press the **OK** button on the **Virus Definition Update Schedule** and **Schedule Virus Definition Updates** windows.
7. Now press the **Exit** button on the **Symantec AntiVirus Corporate Edition** window.
